Question Number	Answer	Additional Guidance	Mark
6(c)	<p>Any two from:</p> <ol style="list-style-type: none"> <li>1. Drivers may feel it is an invasion of privacy (1) because they could be tracked during work hours when they are not delivering items (1).</li> <li>2. Drivers may not feel it is acceptable to be ranked/compensated based on tracking data (1) because unknown events (road works, etc.) will affect the tracking data (1).</li> <li>3. Drivers may be tracked by customers (1) who may be annoyed by perceived delays (1).</li> <li>4. Drivers may worry that their personal data (home address) may not be secure (1) and susceptible to unauthorised access (1).</li> <li>5. Drivers may want to use the vans for their own purposes (1) outside of work hours and may not want this activity tracked (1).</li> </ol>		4

Question Number	Answer	Additional Guidance	Mark
7 (a)	<p>A completed flow chart that includes:</p> <ul style="list-style-type: none"> <li>• Decision diamonds (1) <ul style="list-style-type: none"> <li>○ Directly follow one after the other from lowest to highest</li> <li>○ Label for flow between them must be 'No'</li> <li>○ Flow is unbroken by other instructions as this changes from if/elseif/else to sequence</li> </ul> </li> <li>• Coloured paths <ul style="list-style-type: none"> <li>○ Green path directly follows <math>\leq 100</math> decision with label 'Yes' (1)</li> <li>○ Yellow path directly follows <math>\leq 750</math> decision with label 'Yes' (1)</li> <li>○ Red path directly follows <math>\leq 750</math> decision with label 'No' (1)</li> </ul> </li> <li>• Flow <ul style="list-style-type: none"> <li>○ Three distinct branches which join back into the flow of the loop construct (i.e. do not join back to each other, decision symbols, end, or additional symbols which have not been provided) (1)</li> </ul> </li> <li>• Increment <ul style="list-style-type: none"> <li>○ Single box positioned before any branches / positioned as the last process after all branches (1)</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Different ordering and layout may be used</li> <li>• Each symbol is to be used only once (in question) and no other symbols should be used</li> <li>• Do not penalise lack of arrows on lines</li> <li>• Do not penalise inaccurate drawing of symbols</li> <li>• There should be no looping or flow which degrades what is an if/elseif/else construct to multiple if constructs</li> <li>• A process box can have more than one input (e.g. <math>\text{count}=\text{count}+1</math>), but not a decision box</li> </ul>	6

Question Number	Answer	Additional Guidance	Mark
7(b)(i)	<ul style="list-style-type: none"> <li>To <b>uniquely</b> identify an entity / a record in a table (1)</li> </ul>		1

Question Number	Answer	Additional Guidance	Mark
7(b)(ii)	<ul style="list-style-type: none"> <li>MachineNumber (1)</li> </ul>	Ignore spelling and extraneous text after a correct response	1

Question Number	Answer	Additional Guidance	Mark
7(b)(iii)	<p>Line to connect the correct fields. (1)            Correct labelling of the degree of the relationship. (1)</p> 	<ul style="list-style-type: none"> <li>Other notation for relationships acceptable</li> </ul> <p>1:Many            1:∞            Crows feet:  </p> <ul style="list-style-type: none"> <li>Keys must be clearly connected, not just the tables</li> </ul>	2

Question Number	Answer	Additional Guidance	Mark
7(b)(iv)	<pre> graph TD     Start([Start]) --&gt; Init[total = 0]     Init --&gt; GetOp[/Get operator number/]     GetOp --&gt; MoreRec{Any more records?}     MoreRec -- No --&gt; PrintTotal[/Print Total/]     PrintTotal --&gt; End([End])     MoreRec -- Yes --&gt; ReadRec[/Read next record/]     ReadRec --&gt; CorrectOp{Correct operator?}     CorrectOp -- No --&gt; MoreRec     CorrectOp -- Yes --&gt; DateCheck{Entry date within 12 months?}     DateCheck -- No --&gt; MoreRec     DateCheck -- Yes --&gt; AddTotal[total = total + countSorted]     AddTotal --&gt; MoreRec   </pre>	<p>There are a maximum of 3 marks for functionality.</p> <p>There are a maximum of 3 marks for accuracy of notation.</p> <p>The input/output symbol can be replaced by the process symbol.</p> <p>There are many different solutions, but the flowchart must attempt to solve the problem</p> <p>Indicative content  Initialisation of running total; Incrementing running total; Checking if this record is of interest; Handling end of data structure; Printing total as output.</p>	6

Aspect of Solution	Marks			
	0	1	2	3
<b>Functionality</b>	No rewardable content	There are significant errors in logic, leading to an overall solution that is non-functional.	There are minor errors in logic, leading to an overall solution that is not completely functional.	There are no errors in logic, leading to an overall solution that is fully functional.
<b>Accuracy of notation</b>	No rewardable content	Notation follows a broadly unrecognisable convention that is applied inconsistently, although aspects of it are discernible.	Notation follows a recognisable convention, which is broadly discernible but is applied inconsistently.	Notation follows a recognisable convention and is applied consistently throughout.

Question Number	Answer				Additional Guidance	Mark	
8	<b>Aspect of Solution</b>	<b>Marks</b>					
		<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>		
	<b>Functionality</b>	No awardable content	There are significant errors in logic, leading to an overall solution that is non-functional.	There are minor errors in logic, leading to an overall solution that is not completely functional.	There are no errors in logic, leading to an overall solution that is fully functional.		
	<b>Accuracy of Notation</b>	No awardable content	Notation follows a broadly unrecognisable convention that is applied inconsistently, although aspects of it are discernible.	Notation follows a recognisable convention, which is broadly discernible but is applied inconsistently.	Notation follows a recognisable convention and is applied consistently throughout.		
	<b>Efficiency, Appropriateness, and Accuracy of Solution</b>	No awardable content	There are significant errors in the selection and accurate use of appropriate techniques.	Techniques have been selected and used with some accuracy, although the techniques may not be the most appropriate.	Techniques have been selected and used accurately and appropriately throughout to demonstrate an efficient solution.		
<p>There are a maximum of 3 marks for functionality.  There are a maximum of 3 marks for accuracy of notation.  There are a maximum of 3 marks for efficiency, appropriateness, and accuracy of solution.  Each row is awarded independently.</p>							
						<b>9</b>	

## Question 8 - Pseudocode Example:

```
2 SET count TO 0
3 SET maxWeight TO 0
4 SET minWeight = 9999
5
6 SEND "Enter the weight for the item, 0 to quit: " TO DISPLAY
7 RECEIVE weight (STRING) FROM KEYBOARD
8 WHILE (NOT (weight = 0)):
9     IF (weight < 0) THEN
10        SEND "Error. No negatives allowed" TO DISPLAY
11    ELSE
12        SET count TO count + 1
13        IF (weight > maxWeight) THEN
14            SET maxWeight TO weight
15        IF (weight < minWeight) THEN
16            SET minWeight TO weight
17        ENDIF
18    ENDIF
19    SEND "Enter the weight for the item, 0 to quit: " TO DISPLAY
20    RECEIVE weight (STRING) FROM KEYBOARD
21 END WHILE
22 SEND "Count = " & count TO DISPLAY
23 SEND "Heaviest = " & maxLetterWeight TO DISPLAY
24 SEND "Lightest = " & minWeight TO DISPLAY
```

Initialisation of variables  
minWeight should be high so that it  
will be set with the first value entered.

Condition controlled loop required

Validation for negative numbers

First pass through the loop means that  
minWeight and maxWeight will be the  
same number. If more than one  
number is entered, then an if/else  
would also work, but not in all cases.
