Paper 4C: Further Mechanics 2

You must have:
Mathematical Formulae and Statistical Tables (Green), calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
  – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Unless otherwise indicated, whenever a value of g is required, take $g = 9.8\,\text{m s}^{-2}$ and give your answer to either 2 significant figures or 3 significant figures.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 7 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
  – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

1. Three particles of masses $3m$, $4m$ and $2m$ are placed at the points $(-2, 2)$, $(3, 1)$ and (p, p) respectively.

The value of p is such that the distance of the centre of mass of the three particles from the point $(0, 0)$ is as small as possible.

Find the value of p.

(7)

Question 1 continued

(Total for Question 1 is 7 marks)

2.

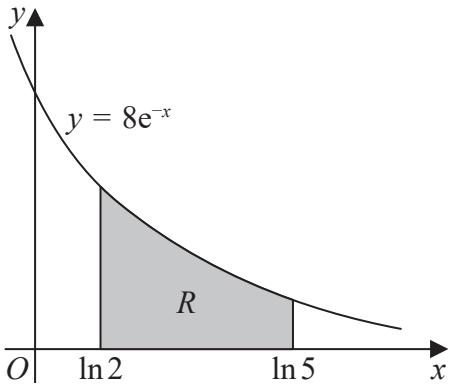

Figure 1

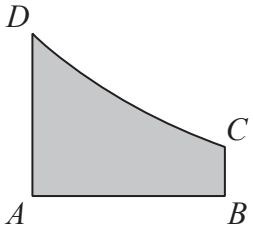

Figure 2

A uniform plane figure R, shown shaded in Figure 1, is bounded by the x-axis, the line with equation $x = \ln 5$, the curve with equation $y = 8e^{-x}$ and the line with equation $x = \ln 2$. The unit of length on each axis is one metre.

The area of R is $2.4\,m^2$

The centre of mass of R is at the point with coordinates $(\bar{x}, \bar{y})$.

(a) Use algebraic integration to show that $\bar{y} = 1.4$

(4)

Figure 2 shows a uniform lamina $ABCD$, which is the same size and shape as R. The lamina is freely suspended from C and hangs in equilibrium with CB at an angle $\theta°$ to the downward vertical.

(b) Find the value of θ

Question 2 continued

Question 2 continued

Question 2 continued

(Total for Question 2 is 10 marks)

3. A particle P of mass 0.5 kg is moving along the positive x-axis in the direction of x increasing. At time t seconds $(t \geqslant 0)$, P is x metres from the origin O and the speed of P is $v\,\text{m s}^{-1}$. The resultant force acting on P is directed towards O and has magnitude kv^2 N, where k is a positive constant.

When $x = 1$, $v = 4$ and when $x = 2$, $v = 2$

(a) Show that $v = ab^x$, where a and b are constants to be found.

(6)

The time taken for the speed of P to decrease from $4\,\text{m s}^{-1}$ to $2\,\text{m s}^{-1}$ is T seconds.

(b) Show that $T = \dfrac{1}{4\ln 2}$

4.

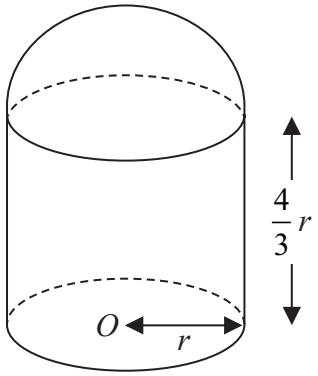

Figure 3

A uniform solid cylinder of base radius r and height $\frac{4}{3}r$ has the same density as a uniform solid hemisphere of radius r. The plane face of the hemisphere is joined to a plane face of the cylinder to form the composite solid S shown in Figure 3.
The point O is the centre of the plane face of S.

(a) Show that the distance from O to the centre of mass of S is $\frac{73}{72}r$

(4)

The solid S is placed with its plane face on a rough horizontal plane. The coefficient of friction between S and the plane is μ. A horizontal force P is applied to the highest point of S. The magnitude of P is gradually increased.

(b) Find the range of values of μ for which S will slide before it starts to tilt.

Question 4 continued

(Total for Question 4 is 9 marks)

5.

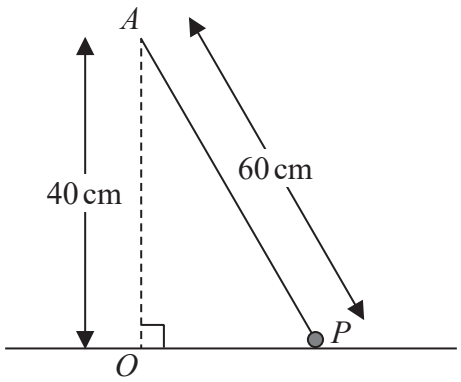

Figure 4

A particle P of mass 0.75 kg is attached to one end of a light inextensible string of length 60 cm. The other end of the string is attached to a fixed point A that is vertically above the point O on a smooth horizontal table, such that $OA = 40$ cm. The particle remains in contact with the table, with the string taut, and moves in a horizontal circle with centre O, as shown in Figure 4.

The particle is moving with a constant angular speed of 3 radians per second.

(a) Find (i) the tension in the string,

(ii) the normal reaction between P and the table.

(7)

The angular speed of P is now gradually increased.

(b) Find the angular speed of P at the instant P loses contact with the table.

(4)

Question 5 continued

Question 5 continued

Question 5 continued

(Total for Question 5 is 11 marks)

6.

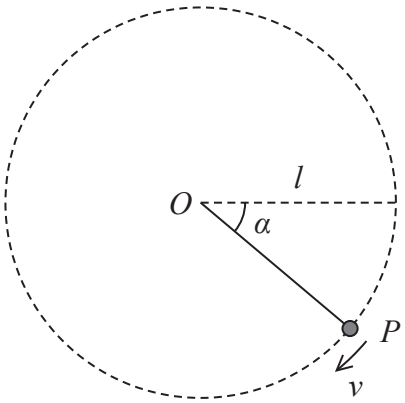

Figure 5

A particle P of mass m is attached to one end of a light inextensible string of length l. The other end of the string is attached to a fixed point O. The particle is held with the string taut and OP horizontal. The particle is then projected vertically downwards with speed u, where $u^2 = \frac{9}{5}gl$. When OP has turned through an angle α and the string is still taut, the speed of P is v, as shown in Figure 5. At this instant the tension in the string is T.

(a) Show that $T = 3mg\sin\alpha + \frac{9}{5}mg$

(6)

(b) Find, in terms of g and l, the speed of P at the instant when the string goes slack.

(3)

(c) Find, in terms of l, the greatest vertical height reached by P above the level of O.

(4)

Question 6 continued

Question 6 continued

Question 6 continued

(Total for Question 6 is 13 marks)

7. A light elastic spring has natural length l and modulus of elasticity $4mg$. A particle P of mass m is attached to one end of the spring. The other end of the spring is attached to a fixed point A. The point B is vertically below A with $AB = \frac{7}{4}l$. The particle P is released from rest at B.

(a) Show that P moves with simple harmonic motion with period $\pi\sqrt{\frac{l}{g}}$

(7)

(b) Find, in terms of m, l and g, the maximum kinetic energy of P during the motion.

(3)

(c) Find the time within each complete oscillation for which the length of the spring is less than l.
