

# Carbohydrates

## Question Paper 2

<b>Level</b>	A Level
<b>Subject</b>	Biology
<b>Exam Board</b>	Edexcel
<b>Topic</b>	Biological Molecules
<b>Sub Topic</b>	Carbohydrates
<b>Booklet</b>	Question Paper 2

**Time Allowed:** 56 minutes

**Score:** /46

**Percentage:** /100

**Grade Boundaries:**

A*	A	B	C	D	E	U
>85%	'77.5%	70%	62.5%	57.5%	45%	<45%

(d) Using the information in paragraphs 12 to 14, explain how lowered testosterone levels may help a cyclist to race harder on successive days.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(e) Explain why Coyle suggests that greater muscle efficiency may be linked to an increase in the percentage of **slow twitch** muscle fibres (paragraph 20).

(2)

.....

.....

.....

.....

.....

.....

.....

\*f) Suggest how ‘the development of a leak in a specific class of calcium channel in muscle cells’ can lead to muscle fatigue (paragraph 23).

(4)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

g) The ACE gene codes for the synthesis of angiotensin converting enzyme (ACE) (paragraph 25).

Complete the table by naming two nucleic acids involved in each of the processes described.

(2)

Process	Two nucleic acids involved in the process
Transcription of the ACE gene	1 .....
	2 .....
Synthesis of ACE at a ribosome	1 .....
	2 .....

(k) Pugh noticed the effects of climate change (paragraph 53).

Name **two** greenhouse gases that contribute to climate change.  
Give **one** source of each of these gases.

(2)

.....

.....

.....

.....

(l) Using the information in paragraph 55, calculate the percentage increase in Pugh’s core body temperature due to his “anticipatory thermogenesis”.

Show your working.

(2)

Answer = ..... %

---

**(Total for Question 1 = 30 marks)**

2 Carbohydrates are important components of our diets.

(a) Distinguish between the structures of each of the following pairs of carbohydrate molecules.

(i) Monosaccharides and disaccharides

(2)

.....

.....

.....

.....

.....

(ii) Amylose and amylopectin

(2)

.....

.....

.....

.....

.....

(b) Explain why a diet consisting of a high proportion of carbohydrates could lead to obesity.

(2)

.....

.....

.....

.....

.....

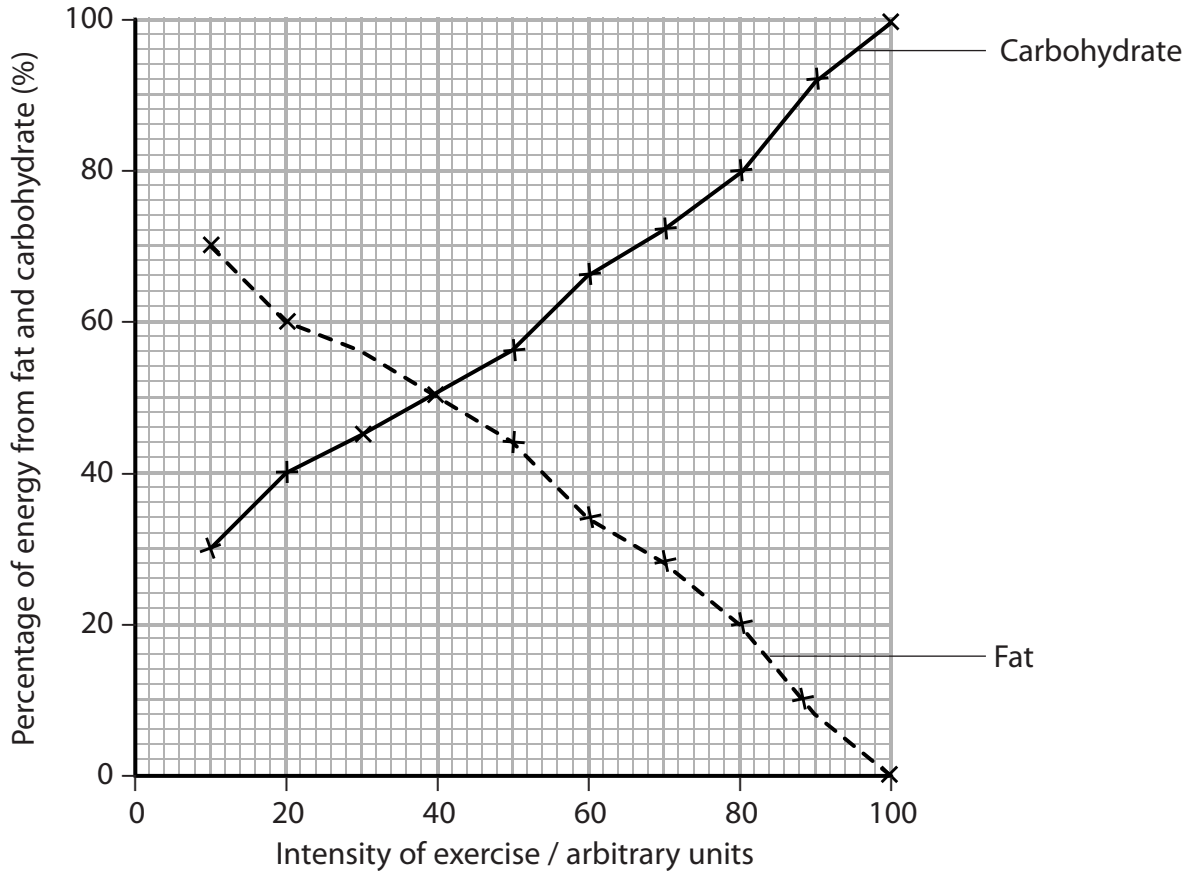

---

**(Total for Question 2 = 6 marks)**

(b) The graph below shows how the percentage of energy obtained from fat and carbohydrate varies according to the intensity of exercise being carried out.

(i) Using the information in the graph, describe how the source of energy used depends on the intensity of exercise.

(3)

.....

.....

.....

.....

.....

.....

- (ii) A carbohydrate-loading diet is used by athletes in preparation for some athletic events. This diet involves increasing carbohydrate intake and decreasing activity, several days before the event.

Carbohydrate-loading is not a suitable method of preparation for all athletic events.

Using the information in the graph and your knowledge of glycogen, explain what type of athletic event could be prepared for using a carbohydrate-loading diet.

**(3)**
