# Basic : Names of Compounds, Homologous Series Etc

#### **Question Paper 2**

Level	IGCSE
Subject	Chemistry
ExamBoard	CIE
Topic	Organic Chemistry
Sub-Topic	Basics: Names of compounds, Homologous Series etc
Paper	(Extended) Theory
Booklet	Question Paper 2

TimeAllowed: 71 minutes

Score: /59

- 3 Some of the factors that can determine the rate of a reaction are concentration, temperature and light intensity.
  - (a) A small piece of calcium carbonate was added to an excess of hydrochloric acid. The time taken for the carbonate to react completely was measured.

$$CaCO_3(s) + 2HCl(aq) \rightarrow CaCl_2(aq) + CO_2(g) + H_2O(l)$$

The experiment was repeated at the same temperature, using pieces of calcium carbonate of the same size but with acid of a different concentration. In all the experiments an excess of acid was used.

concentration of acid/mol dm <sup>-3</sup>	4	2	2	
number of pieces of carbonate	1	1		
time/s		80		160

(i)	Complete the table (assume the rate is proportional to both the acid concentration and the number of pieces of calcium carbonate). [3]
(ii)	Explain why the reaction rate would increase if the temperature was increased.
	[2]
(iii)	Explain why the rate of this reaction increases if the piece of carbonate is crushed to a powder.
	[1]
(iv)	Fine powders mixed with air can explode violently. Name an industrial process where there is a risk of this type of explosion.

<b>(b)</b> Soc	dium chlorate(I) decomposes to form oxygen and sodium chloride. This is an example

of a photochemical reaction. The rate of reaction depends on the intensity of the light.

(c) Copper(II) oxide can oxidise butanol to liquid **X**, whose pH is 4.

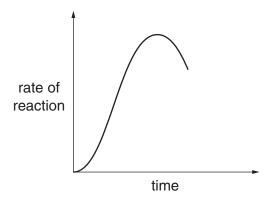

- (i) Give the name of another reagent which can oxidise butanol.
  - [1]
- (ii) Which homologous series does liquid X belong to?
  - [1]
- (iii) State the formula of liquid X.

(d) The alcohol ethanol can be made by fermentation. Yeast is added to aqueous glucose.

$$C_6H_{12}O_6(aq) \rightarrow 2C_2H_5OH(aq) + 2CO_2(g)$$

Carbon dioxide is given off and the mixture becomes warm, as the reaction is exothermic. The graph shows how the rate of reaction varies over several days.

(i) Suggest a method of measuring the rate of this reaction.

		[2]
(ii)	Why does the rate initially increase?	
		[1]

(iii) Suggest **two** reasons why the rate eventually decreases.
