Alcohols & Carboxylic Acids

Question Paper 6

Level	IGCSE	
Subject	Chemistry	
ExamBoard	CIE	
Topic	Organic Chemistry	
Sub-Topic	Alcohols & Carboxylic Acids	
Paper	(Extended) Theory	
Booklet	Question Paper 6	

TimeAllowed 75 minutes

: Score: /62

Percentage: /100

1	which h	enes are unsaturated hydrocarbons. They form a homologous series, the members of nave the same chemical properties. Indergo addition reactions and are easily oxidised.
	(a) The	e following hydrocarbons are isomers.
		$\begin{array}{cccccccccccccccccccccccccccccccccccc$
	(i)	Explain why these two hydrocarbons are isomers.
		[2]
	(ii)	Give the structural formula of another hydrocarbon which is isomeric with the above.
		[1]
	. ,	ve the structural formula and name of each of the products of the following addition actions.
	(i)	ethene and bromine
		structural formula of product
		name of product[2]
	(ii)	propene and hydrogen
		structural formula of product
		name of product[2]
	(iii)	but-1-ene and water
		structural formula of product

name of product[2]

- (c) Alkenes can be oxidised to carboxylic acids.
 - (i) For example, propene, $CH_3-CH=CH_2$, would produce ethanoic acid, CH_3-COOH , and methanoic acid, H-COOH. Deduce the formulae of the alkenes which would form the following carboxylic acids when oxidised.

ethanoic acid and propanoic acid

only ethanoic acid

(ii) Describe the colour change you would observe when an alkene is oxidised with acidified potassium manganate(VII).

(d) Alkenes polymerise to form addition polymers.
Draw the structural formula of poly(cyanoethene), include at least two monomer units.
The structural formula of the monomer, cyanoethene, is given below.

Plants can make complex molecules from simple starting materials, such as water, carbon

	and nitrates. Substances produced by plants include sugars, more comple drates, esters, proteins, vegetable oils and fats.	X
(a)	Describe how you could decide from its molecular formula whether a compound is carbohydrate.	a
	[2	2]
(ii)	Plants can change the sugar, glucose, into starch which is a more comple carbohydrate. What type of reaction is this?	X
	[2	2]
	e fermentation of glucose can be carried out in the apparatus shown below. After a fewer street that the reaction stops. A 12% aqueous solution of ethanol has been produced.	W
	water allows carbon dioxide to escape but prevents air from entering aqueous glucose and yeast	
(i)	The enzyme, zymase, catalyses the anaerobic respiration of the yeast. Explain the term <i>respiration</i> .	
	[2	2]
(ii)	Complete the equation.	
	$C_6H_{12}O_6 \rightarrow \dots + \dots$ [2 glucose carbon dioxide	2]
(iii)	Why must air be kept out of the flask?	
	[1]

(c) The ester methyl butanoate is found in apples. It can be made from butanoic acid and methanol. Their structural formulae are given below.

Use the information given above to deduce the structural formula of methyl butanoate showing all the bonds.

[2]

(d) The equation represents the hydrolysis of a naturally occurring ester.

- (i) Which substance in the equation is an alcohol? Put a ring around this substance in the equation above. [1]
- (ii) Is the alkyl group, $C_{17}H_{35}$, in this ester saturated or unsaturated? Give a reason for your choice.

.....[1]

(iii) What type of compound is represented by the formula C₁₇H₃₅COONa? What is the major use for compounds of this type?

type of compound

use[2]

(e) Proteins are natural macromolecules. Draw the structural formula of a typical protein. Include three monomer units. You may represent amino acids by formulae of the type drawn below.

[3]

[Total: 18]

(a)			below.		
		alcohol	formula	heat of combustion in kJ/mol	
		methanol	CH ₃ OH	730	
		ethanol	CH ₃ -CH ₂ -OH	1380	
		propan-1-ol			
		butan-1-ol	CH ₃ -CH ₂ -CH ₂ -CH ₂ -OH	2680	
		pentan-1-ol	CH ₃ -CH ₂ -CH ₂ -CH ₂ -CH ₂ -OH	3350	
	(i)	Complete the ta	ble		[
	(ii)	Complete the ed	quation for the combustion of per	ntan-1-ol in excess oxy	/nen
'b\	Stat		$1 + \dots O_2 \rightarrow \dots +$		
(b)			eristics of a homologous series		
(b)		te three characte	eristics of a homologous series of series.		n of physic
	prop	te three characte	eristics of a homologous series of series.	other than the variatio	n of physic
	prop	te three characte perties down the	eristics of a homologous series of series. Ols are isomers.	other than the variatio	
	prop	te three characte perties down the following alcoho	eristics of a homologous series of series. ols are isomers. EH ₂ -CH ₂ -CH ₂ -OH and (CH ₃) ₂ C	other than the variatio	n of physic
	prop	te three characte perties down the	eristics of a homologous series of series. ols are isomers. EH ₂ -CH ₂ -CH ₂ -OH and (CH ₃) ₂ C	other than the variatio	n of physic
	prop	te three characte perties down the	eristics of a homologous series of series. ols are isomers. EH ₂ -CH ₂ -CH ₂ -OH and (CH ₃) ₂ C	other than the variatio	n of physic

(ii) Draw the structural formula of another isomer of the above alcohols.

(d)	Alcohols can be made by fermentation and from petroleum.				
	(i)	Ethanol is made from sugars by fermentation.			
		$C_6H_{12}O_6 \rightarrow 2C_2H_5OH + 2CO_2$			
		The mass of one mole of glucose, $C_6H_{12}O_6$, is 180 g. Calculate the maximum mass of ethanol which could be obtained from 72 g of glucose.			
		[3]			
	(ii)	Describe how ethanol is made from petroleum.			
		petroleum (alkanes) $ ightarrow$ ethene $ ightarrow$ ethanol

ļ			enes are unsaturated hydrocarbons. They form a homologous series, the members of ave similar chemical properties:	of
		•	easily oxidised addition reactions polymerisation combustion.	
	(a)	All	the alkenes have the same empirical formula.	
		(i)	State their empirical formula.	
			[1]
		(ii)	Why is the empirical formula the same for all alkenes?	
			[1]
	(b)		enes can be oxidised to carboxylic acids by boiling with aqueous potassiunganate(VII).	n
		(i)	Pent-2-ene, $\mathrm{CH_3-CH_2-CH=CH-CH_3}$, oxidises to $\mathrm{CH_3-CH_2-COOH}$ and $\mathrm{CH_3COOH}$ Name these two acids.	Ⅎ.
			CH ₃ -CH ₂ -COOH	
			CH ₃ COOH	2]
		(ii)	Most alkenes oxidise to two carboxylic acids. Deduce the formula of an alkene which forms only one carboxylic acid.	h
			[-	1]
	(c)	Coi	mplete the following equations for the addition reactions of propene.	
		(i)	$CH_3-CH=CH_2 + Br_2 \rightarrow \dots$	1]
		(ii)	$CH_3-CH=CH_2 + H_2O \rightarrow \dots$	1]
	(d)	Dra	w the structural formula of poly(propene)
