1		olysis of complex carbohydrates to simple sugars is catalysed by enzymes called Irases and also by dilute acids.
	(a) (They are both catalysts. How do enzymes differ from catalysts such as dilute acids?
		[1]
	(i	Explain why ethanol, C_2H_6O , is not a carbohydrate but glucose, $C_6H_{12}O_6$, is a carbohydrate.
		[2]
	` '	v the structure of a complex carbohydrate, such as starch. The formula of a simple or can be represented by HO———OH.

For more awesome GCSE and A level resources, visit us at www.savemyexams.co.uk/

- (c) lodine reacts with starch to form a deep blue colour.
 - (i) In the experiment illustrated below, samples are removed at intervals and tested with iodine in potassium iodide solution.

Typical results of this experiment are shown in the table.

time/min	colour of sample tested with iodine in potassium iodide solution	
0	deep blue	
10	pale blue	
30	colourless	

	Explain these results.
	[3]
(ii)	If the experiment was repeated at a higher temperature, 60 °C, all the samples stayed blue. Suggest an explanation.
	[1]
	[Total: 10]

2 Lactic acid can be made from corn starch.

lactic acid

It polymerises to form the polymer, polylactic acid (PLA) which is biodegradable.

(a)	Sug	ggest two advantages that PLA has compared with a polymer made from petroleu	m.
			[2]
(b)	The	e structure of PLA is given below.	
		CH ₃ O CH ₃ CH CH-	
	(i)	What type of compound contains the group that is circled?	
			[1]
	(ii)	Complete the following sentence.	
		Lactic acid molecules can form this group because they contain both an	
		group and angroup.	[2]
((iii)	Is the formation of PLA, an addition or condensation polymerisation? Give reason for your choice.	а

[2]

(c) When lactic acid is heated, acrylic acid is formed.

(i)	Complete the word equation for the action of heat on lactic acid.	
	lactic acid →+	[1]
(ii)	Describe a test that would distinguish between lactic acid and acrylic acid.	
	test	
	result for lactic acid	
	result for acrylic acid	[3]
(iii)	Describe a test, other than using an indicator, which would show that be chemicals contain an acid group.	oth
	test	
	result	

[Total: 13]

[2]

- Three of the factors that can influence the rate of a chemical reaction are:
 - physical state of the reactants

 - the presence of a catalyst
 - (a) The first recorded dust explosion was in a flour mill in Italy in 1785. Flour contains carbohydrates. Explosions are very fast exothermic reactions.

(i)	Use the collision theory to explain why the reaction between the particles of flour
	and the oxygen in the air is very fast.

......

[2]

(ii) Write a word equation for this exothermic reaction.

[1]

The decomposition of silver(I) bromide is the basis of film photography. The equation for this decomposition is:

$$2AgBr \longrightarrow 2Ag + Br_2$$
 white black

This reaction is photochemical.

A piece of white paper was coated with silver(I) bromide and the following experiment was carried out.

(b) Explain the results.

ra

(c)	aqı	e fermentation of glucose is catalysed by enzymes from yeast. Yeast is added ueous glucose, the solution starts to bubble and becomes cloudy as more years are formed.	
		$C_6H_{12}O_6(aq) \longrightarrow 2C_2H_5OH(aq) + 2CO_2(g)$	
	The	e reaction is exothermic.	
	Eve	entually the fermentation stops when the concentration of ethanol is about 12%.	
	(i)	What is an enzyme?	
			[1]
	(ii)	Pasteur said that fermentation was respiration in the absence of air. Suggest definition of <i>respiration</i> .	st a
			[2]
	(iii)	On a large scale, the reaction mixture is cooled. Suggest a reason why this necessary.	s is
			[1]
	(iv)	Why does the fermentation stop? Suggest two reasons.	
			[2]
	(v)	When the fermentation stops, there is a mixture of dilute aqueous ethanol a yeast. Suggest a technique which could be used to remove the cloudiness due the yeast.	
			[1]
		Name a technique which will separate the ethanol from the ethanol/water mixture	re.

Alk	Alkenes are unsaturated hydrocarbons. They undergo addition reactions.				
(a)		Two of the methods of making alkenes are cracking and the thermal decomposition of chloroalkanes.			
	(i)	Complete an	equation for the cracking of the alkane, decane.		
		C ₁₀ H ₂₂ decane	→ +		
	(ii)	•	be made by the thermal decomposition of chloropropane. chloropropane can be made from propane.		
		reagents	propane and		
		conditions		[4]	
(b)	b) The following alkenes are isomers.				
			$\begin{array}{ccc} \mathrm{CH_3-CH_2-CH=CH_2} & & \mathrm{CH_3-C=CH_2} \\ & & \mathrm{CH_3} \end{array}$		
	(i)	Explain why t	hey are isomers.		
	(ii)	Give the name the above.	ne and structural formula of another hydrocarbon that is isomeric w	vith	
		name			
		structural forr	mula		

For more awesome GCSE and A level resources, visit us at www.savemyexams.co.uk/

(c) Give the name of the product when but-1-ene reacts with each of the following.

steam

hydrogen

bromine[3]

- (d) Alkenes can polymerise.
 - (i) Deduce the name and structural formula of the monomer from the structure of the polymer.

name of monomer

structural formula

(ii) Draw the structure of the polymer formed from the following monomer.

(iii)	Describe the pollution problems caused by the disposal of polymers in landfill sites and by burning.			
	landfill sites			
	[2			
	burning			
	[1]			

- 5 Some of the factors that can determine the rate of a reaction are concentration, temperature and light intensity.
 - (a) A small piece of calcium carbonate was added to an excess of hydrochloric acid. The time taken for the carbonate to react completely was measured.

$$CaCO_3(s) + 2HCl(aq) \rightarrow CaCl_2(aq) + CO_2(g) + H_2O(l)$$

The experiment was repeated at the same temperature, using pieces of calcium carbonate of the same size but with acid of a different concentration. In all the experiments an excess of acid was used.

concentration of acid/mol dm ⁻³	4	2	2	
number of pieces of carbonate	1	1		
time/s		80		160

(i)	Complete the table (assume the rate is proportional to both the acid concentration and the number of pieces of calcium carbonate). [3]
(ii)	Explain why the reaction rate would increase if the temperature was increased.
	[2]
(iii)	Explain why the rate of this reaction increases if the piece of carbonate is crushed to a powder.
	[1]
(iv)	Fine powders mixed with air can explode violently. Name an industrial process where there is a risk of this type of explosion.
	[1]

(b) Sodium chlorate(I) decomposes to form oxygen and sodium chloride. This is an example of a photochemical reaction. The rate of reaction depends on the intensity of the light.

 $2NaClO(aq) \rightarrow 2NaCl(aq) + O_2(g)$

Describe how the rate of this reaction could be measured.

(i)

(ii)	How could you show that this reaction is photochemical?	
		[1]
	· · · · · · · · · · · · · · · · · · ·	nore
(i)	Complete the equation.	
	$6CO_2 + 6H_2O \rightarrow C_6H_{12}O_6 + \dots$	[2]
(ii)	Glucose can be represented as	
	но — он	
	Pho con (i)	Photosynthesis is another example of a photochemical reaction. Glucose and macomplex carbohydrates are made from carbon dioxide and water. (i) Complete the equation. $6\text{CO}_2 + 6\text{H}_2\text{O} \longrightarrow \text{C}_6\text{H}_{12}\text{O}_6 + \dots$ (ii) Glucose can be represented as

Draw the structure of a more complex carbohydrate that can be formed from glucose by condensation polymerisation.
