

The roles of genes in determining the phenotype

Question Paper 1

Level	International A Level
Subject	Biology
Exam Board	CIE
Topic	Inherited change
Sub Topic	The roles of genes in determining the phenotype
Booklet	Theory
Paper Type	Question Paper 1

Time Allowed : 81 minutes

Score : / 67

Percentage : /100

Grade Boundaries:

A*	A	B	C	D	E	U
>85%	'77.5%	70%	62.5%	57.5%	45%	<45%

- (ii) Explain why it would be difficult to transfer this resistance into susceptible rice plants by genetic engineering.

.....
.....
.....
.....
.....[2]

- (iii) Explain why the presence of large numbers of Xoo in the intercellular air spaces of rice plants affects the ability of the plants to grow with their roots submerged in water.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

[Total: 14]

3 The fruit fly, *Drosophila melanogaster*, has many phenotypic variations and has been used in experiments to demonstrate the principles of inheritance.

(a) The majority of fruit flies have red eyes but there is a variant with white eyes.

Fig. 7.1 shows the red-eyed and white-eyed variants of the fruit fly.

Fig. 7.1

The gene for eye colour is located on the X chromosome.

Using suitable symbols, draw a genetic diagram to show the possible offspring of a cross between a heterozygous red-eyed female fruit fly with a white-eyed male fruit fly.

key to symbols:

.....

parental
phenotypes

red-eyed female

white-eyed male

parental
genotypes

gametes

offspring
genotypes

offspring
phenotypes

(b) One of the genes controlling the clotting of blood in humans is also located on the X chromosome. A rare variation of the gene, a recessive allele for haemophilia, can lead to a condition where the blood fails to clot properly.

(i) State why a man who has haemophilia is unable to pass the condition on to his son.

.....
..... [1]

(ii) Queen Victoria of Great Britain in the 19th century was a carrier of haemophilia, but did not have the condition.

State the term used to describe the genotype of a carrier.

..... [1]

(iii) Neither of Queen Victoria's parents carried the allele for haemophilia.

Suggest how Queen Victoria could have become a carrier.

.....
..... [1]

[Total: 8]

5 (a) Fig. 4.1 shows the male and female flowers of maize.

Fig. 4.1

(i) With reference to Fig. 4.1 suggest how the flowering habit of maize encourages wind pollination.

.....
.....
.....
.....
.....
.....
..... [3]

(ii) In a maize plant, the anthers normally ripen and release pollen before the stigmas are mature and ready to receive pollen. This encourages cross-pollination.

Explain **two** potential advantages of cross-pollination to a plant species.

.....
.....
.....
.....
..... [2]

(b) The conditions in which wheat and maize are grown affect their ability to photosynthesise.

Fig. 4.2 compares the rate of photosynthesis of wheat and maize at different temperatures.

Fig. 4.2

With reference to Fig. 4.2:

(i) **compare** the effect of temperature on the rates of photosynthesis of wheat and maize

.....

.....

.....

.....

.....

.....

.....

.....

[2]

- (ii) State, giving a reason, which type of grain would be beneficial for a person with anaemia.

.....
.....
.....
..... [2]
