## MARK SCHEME for the October/November 2012 series

## 9700 BIOLOGY

9700/23

Paper 2 (AS Structured Questions), maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2	Mark Scheme	Syllabus	Paper
	GCE AS/A LEVEL – October/November 2012	9700	23

Mark scheme abbreviations:

; / R A	separates marking points alternative answers for the same point reject accept (for answers correctly cued by the question, or by extra guidance)
AW	alternative wording (where responses vary more than usual)
<u>underline</u>	actual word given must be used by candidate (grammatical variants excepted)
max	indicates the maximum number of marks that can be given
ora	or reverse argument
mp	marking point (with relevant number)
ecf	error carried forward
1	ignore
AVP	alternative valid point (examples given)

## 3 (a) look at quoted data to confirm qualitative statements if unclear

1 people who never smoked have the lowest percentage of deaths (due to lung cancer); must be comparative

for age

2 either

the younger / earlier the person starts smoking the higher the percentage of deaths or

the older / later the person starts smoking the lower the percentage of deaths (due to lung cancer);

for number of cigarettes per day

3 either

increasing / AW, the number of cigarettes smoked per day increases the percentage of deaths

or

decreasing / AW, the number of cigarettes smoked per day decreases the percentage of deaths ;

different 'start' ages for the two types of smokers

- 4 highest percentage deaths is for those with an early start <u>and</u> smoke, 21–39 (cigarettes per day) / the most / AW ;
- 5 greatest difference in percentage deaths occurs in those that start smoking early ; **ora** [max 4]
- (b) (i) 1 forms carboxyhaemoglobin;
  - 2 reduces affinity of Hb for oxygen / Hb has higher affinity for CO than for oxygen ; **ignore** 'picks up CO rather than oxygen', if mp3 is given then allow
  - 3 reduces quantity of oxygen transported (in blood) / AW ; R prevents
  - damages lining of arteries ;
    A promotes / AW, atheroma / atherosclerosis / plaque [max 2]
  - (ii) raises, heart rate / blood pressure ; reduces diameter of arterioles ; decreases blood flow to body extremities ; increases 'stickiness' of platelets / promotes, blood clotting / thrombosis ; [max 2]
