

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level and GCE Advanced Level

MARK SCHEME for the May/June 2007 question paper

9701 CHEMISTRY

9701/32

Paper 32 (Advanced Practical Skills 2),
maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2	Mark Scheme	Syllabus	Paper
	GCE A/AS LEVEL – May/June 2007	9701	32

Skill		Breakdown of marks	
Manipulation, measurement and observation	16 marks	Successful <u>collection</u> of data and observations	8 marks
		<u>Decisions</u> relating to measurements or observations	8 marks
Presentation of data and observations	12 marks	<u>Recording</u> data and observations	5 marks
		<u>Display</u> of calculation and reasoning	3 marks
		Data <u>layout</u>	4 marks
Analysis, conclusions and evaluation	12 marks	<u>Interpretation</u> of data or observations and identifying sources of error	6 marks
		Drawing <u>conclusions</u>	5 marks
		Suggesting <u>improvements</u>	1 mark

	GCE A/AS LEVEL – May/June 2007	9701	32

Question	Sections	Indicative material	Mark	
1 (a)	(i) PDO Layout	Tabulates initial and final burette readings and volume added in each of the tables <i>Tabulation may be vertical or horizontal.</i> <i>Ignore absence of units</i> <i>Do NOT award this mark if any final and initial burette readings are inverted or 50 is used as the initial burette reading</i>	[1]	[6]
	(ii) PDO Recording	Both burette readings in the dilution table and <u>final and initial</u> burette readings for all accurate titres in the titration table recorded to the nearest 0.05 cm ³ . <i>Treat all titres as “accurate” unless labelled rough or trial</i>	[1]	
	(iii) MMO Collection	Follows instructions – Rough plus sufficient accurate titrations <i>Award this mark if there are three or more titres <u>OR</u> where two titres only have been recorded they are within 0.20 cm³ (neither labelled as rough).</i> <i>The first titre does not have to be labelled rough</i>	[1]	
	(iv) MMO Decisions	Has at least two uncorrected titres within 0.1 cm ³ Accuracy (v) and (vi) Give 2 marks if difference to Supervisor is 0.3 or less Give 1 of these two marks for a difference of 0.3+ to 0.5 Give 0 marks for a difference greater than 0.5	[1] [2]	
(b)	ACE Interpretation	Candidate selects/calculates appropriate “average” from any uncorrected titre values within 0.20 cm ³ .	[1]	[1]
(c) (i)(ii)	ACE Interpretation	Examiner checks each of the first four steps of the calculation. Award two marks if all steps are chemically correct. Withhold 1 mark for each chemical error – no negative marks. Count non-completed steps as chemical errors. step 1 $\frac{\text{titre}}{1000} \times 0.0120$ step 2 $\times 5$ step 3 $\times \frac{1000}{25}$ step 4 $\times \frac{250}{\text{volume diluted}}$	[2]	[5]
	(iii) PDO Display	Working shown in each step attempted	[1]	
	(iv)	3 or 4 significant figures in final answer given for each of the first four steps	[1]	
	(v)	Answer to last section is correctly evaluated to 4 sf for (candidate’s value to 4 th step $\times 392$). <i>(Answer may be from final answer to step 4 or using number carried on calculator).</i>	[1]	

Page 4	Mark Scheme	Syllabus	Paper
	GCE A/AS LEVEL – May/June 2007	9701	32

Question	Sections	Indicative material	Mark	
(d)	ACE Improvement	Candidate suggests heating solution to eliminate air OR suggests practical way of storing water without air re-dissolving <ul style="list-style-type: none"> • Storing in a full bottle (no air space) • Ignore and reference to vacuum (pump) 	[1]	[1]
(e)	ACE Interpretation	Smallest division correctly read from burette and error estimated at $\frac{1}{2}$ smallest division <i>Burettes are graduated at 0.1 cm^3</i>	[1]	[1]
(f)	ACE Interpretation	Doubles error in reading to get maximum possible error	[1]	[1]
(g)	ACE Conclusions	Explains that errors are identical (in the same direction) (and cancel).	[1]	[1]
			[Total: 16]	

Page 5	Mark Scheme	Syllabus	Paper
	GCE A/AS LEVEL – May/June 2007	9701	32

Question	Sections	Indicative material	Mark	
2 (a)	MMO Decisions	Calculates the minimum mass of NaHCO ₃ needed to give an excess. (10.08 g) <i>Do not penalise rounding to 10.1 g if 10.08 has been shown in calculation</i>	[1]	[1]
(b)	PDO Layout PDO Recording MMO Collection	Tabulates all experimental readings: (mass of empty weighing bottle, mass of bottle + solid, mass of bottle + residual solid, initial temperature, final temperature) and ΔT . Single table covering both experiments Table has correct labels and units (<u>only g and °C</u>) All weighings recorded with consistent precision to at least 1 dp and all temperature readings recorded to 1 dp only Give one mark if difference between (all) candidate's ΔT values, as calculated by the Examiner , is within 0.5 °C Give one mark if the difference between mean ΔT value for Supervisor and closer/closest ΔT value of candidate, as calculated by the Examiner , is within 0.5 °C	[1] [1] [1] [1] [1]	[6]
(c)	ACE Interpretation	Examiner calculates to 1 decimal place the mean ΔT value from the candidate's ΔT values for each experiment. Give 1 mark if the candidate's answer to (d) is within 1% of (examiner calculated mean ΔT x 4.3) and the correct sign (+) is given.	[1]	[1]
			[Total: 8]

	GCE A/AS LEVEL – May/June 2007	9701	32

Question	Sections	Indicative material	Mark	
FB 6 is iron(III) chloride; FB 7 is chromium(III) iodide (CrCl₃ / KI); FB 8 is cobalt(II) sulphate				
3 (a) (i)	PDO Layout	Presents tests, <u>techniques</u> and observations clearly <i>To gain this mark there should be some reference in the table to washing at least one precipitate</i>	[1]	
(ii)	PDO Recording	All observations in a single table	[1]	
(iii)	MMO Decisions	Selects silver nitrate or other soluble silver salt as reagent Addition of Ag ⁺ (aq) or a solution containing Ag ⁺ or silver(I) ions is acceptable	[1]	
(iv)		Uses (aqueous) ammonia with the silver halide precipitates	[1]	
(v)		Filters or decants to obtain ppt (as soln is coloured not easy to see ppt) <i>Reference to separating precipitate and solution for at least one of FB 6 or FB 7</i>	[1]	
(vi)	MMO Collection	Records yellow ppt insoluble in ammonia with FB 7 and white ppt soluble in ammonia with FB 6	[1]	
(vii)	ACE Conclusions	Uses observations to make consequential deductions as to halide ions present. <i>Candidates should identify Cl⁻ in FB 6 and I⁻ in FB 7 (no halide in FB 8) but mark other halides correct providing observations are completely correct for these ions If AgNO₃ and Pb(NO₃)₂ selected as reagents <u>only</u> points (i), (ii), (iii) and (v) can awarded</i>	[1]	[7]
(b)	MMO Decisions	Selects barium chloride or barium nitrate (Addition of Ba ²⁺ aq) or a solution containing Ba ²⁺ or barium ions is acceptable] <u>and</u> hydrochloric (or nitric) acid as reagents <i>not sulphuric acid</i>	[1]	
	MMO Collection	Records white ppt with BaCl ₂ , insoluble in acid for <u>only FB 8 or</u> White ppt with BaCl ₂ and no SO ₂ (gas turning dichromate(VII) green) when FB 8 tested with HCl.	[1]	
	ACE Conclusion	Uses observations to make consequential conclusion for sulphate or sulphite if the white precipitate with BaCl ₂ is observed to dissolve when acid is added Marks in this section may be awarded for testing a single solution providing Ag ⁺ (aq) has been added to <u>all three solutions</u> and the halides identified If <u>sulphuric acid or an unspecified acid</u> is added after BaCl ₂ , one mark maximum can be awarded in the section for a white ppt insoluble in acid. No marks if the acid is added before BaCl ₂	[1]	[3]

	GCE A/AS LEVEL – May/June 2007	9701	32

Question	Sections	Indicative material	Mark	
(c)	PDO Layout	Tabulates observations <i>[This table should show clearly rows/columns for NaOH and NH₃ as reagents and FB6/FB7/FB8. The table does not need lines to be drawn – clearly laid out and headed blocks of text are acceptable]</i>	[1]	[4]
	PDO Recording	All observations reported to reagent added in excess	[1] [1]	
	MMO Collection	Give one mark each for correct observations for <u>TWO</u> of the following FB 6 – (Fe ³⁺), FB 7 (Cr ³⁺), and FB 8 (Co ²⁺). FB 6 – <u>red-brown</u> /(brown/rusty) ppt, insoluble in excess with both NaOH and NH ₃ . FB 7 – <u>grey-green</u> ppt with NaOH and NH ₃ . ppt soluble in excess NaOH (to give a dark green solution) ppt insoluble in excess NH ₃ . FB 8 – blue ppt with NaOH, (possibly turning pink) or brown with excess of the reagent. The ppt is insoluble. Blue ppt with NH ₃ , expected to be insoluble in excess reagent of concentration used but (possibly dissolving to form a yellow/brown solution).	[1]	
(d)	ACE Conclusions	Correctly identifies and gives evidence for Fe ³⁺ in FB 6 Minimum evidence – red-brown ppt with NaOH and with NH ₃ Cr ³⁺ in FB 7 Minimum evidence – grey-green ppt with NaOH and with NH ₃ OR grey-green ppt with NaOH, soluble in excess to form a green solution	[1]	[2]
		Recognises transition metal cation from various colour changes of precipitates Where FB 8 is included as one of the identified ions (probably incorrectly as Cu ²⁺) <u>the transition metal cation may be awarded for Cr³⁺</u> from the colour of the precipitate with NaOH and NH ₃	[1]	
			[Total: 16]
