## MARK SCHEME for the May/June 2008 question paper

# 9702 PHYSICS

9702/32

Paper 32 (Advanced Practical Skills 2), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

UNIVERSITY of CAMBRIDGE International Examinations

Pa	ge 2	Mark Scheme	Syllabus	Paper
		GCE A/AS LEVEL – May/June 2008	9702	32
Mar	nipulatio	n, measurement and observation		
Suc	ccessful o	collection of data		
(b)	Value of	length 0.470m to 0.490m (to nearest cm or mm).		[1]
(c)	10 <i>T</i> (or n	nore) has been measured (could be evidence in table	of results).	[1]
(c)	Repeat r	eadings. At least two readings of $10T$ or $T$ (could be in	table).	[1]
(d)	Six sets	e number of readings as a ringed total next to the table of values for $T$ and $l$ scores 3 marks, five sets scores 2 ta shows reverse trend then $-1$ .		[3]
(d)	Apparatu	is set up without help from Supervisor.		[1]
Rar	nge and c	listribution of values		
(d)	-	f results (including the value in <b>(b)</b> ). lude 48cm and 18cm (nominal values), with no interva	l greater than 7cr	n. [1]
Pre	sentatior	n of data and observations		
Tab	ole: layou	t		
(d)	Each col	headings. umn heading must contain a quantity and a unit where nits in the body of the table.	appropriate.	
		ust be some distinguishing mark between the quantity is expected, but accept, for example, $T(s)$ ).	and the unit	[1]
Tab	ole: raw d	lata		
(d)	All value	ncy of presentation of <u>raw</u> readings. s of $10T$ (or $T$ ) must be given to the same number of d are to the nearest second then $-1$ . Allow trailing zeros.		[1]
Tab	ole: calcu	lated quantities		
(d)	If 10 <i>T</i> is If 10 <i>T</i> is	nt figures. Apply to $T^2$ . Take trailing zeros into account given to 2 sf, then accept $T^2$ to 2 or 3 sf. given to 3 sf, then accept $T^2$ to 3 or 4 sf. given to 4 sf, then accept $T^2$ to 4 or 5 sf.		[1]
		-		[']
(d)		f $T^2$ correct. value (from candidate's <i>T</i> ). If incorrect, write in the co	rrect value.	[1]

### Graph: layout

Graph. layout	
<ul> <li>(Graph) Axes.</li> <li>Sensible scales must be used (not 3:10 etc.), with labels at least even squares.</li> <li>Scales must be such that the plotted points occupy at least half the graph grand <i>y</i> directions.</li> <li>Scales must be labelled with the quantity which is being plotted. Ignore units Indicate false origin with FO.</li> <li>Allow reversed axes, but if wrong graph plotted then −1.</li> </ul>	rid in both <i>x</i>
Graph: plotting of points	
(Graph) All observations must be plotted. Count and circle the number of plots. Ring and check a suspect plot. Tick if correct. Re-plot if incorrect. Work to an accuracy of half a small square. Don't allow blobs (i.e. large dots with diameter ≥ half a small square).	[1]
Graph: trend line	
(Graph) Line of best fit. Allow 5 trend plots. Judge by scatter of points about the candidate's line. Indicate best line if candidate's line is not the best line. Don't allow a line thicker than half a small square.	[1]
Quality of data	
(Graph) Judge by scatter of points. Allow 2cm (scaled) in the <i>l</i> direction either side of any line that could be draw All plots from table are needed for this mark to be scored. Do not award this mark if the trend is wrong or if wrong graph is drawn.	wn. [1]
Analysis, conclusions and evaluation	
Interpretation of graph	
(f) Gradient. The hypotenuse of the Δ must be ≥ half the length of the drawn line. Read-offs must be accurate to half a small square. Check for Δy/Δx (do not allow Δx/Δy).	[1]
(f) The <i>y</i> -intercept value must be read to the nearest half square. Check for false origin. The value can be calculated using ratios or $y = mx + c$ .	[1]
Drawing conclusions	
(g) Value for <i>M</i> . Check substitution into "gradient = $4\pi^2 m/g(m+M)$ " is correct. Allow 10 – 70g. Unit required.	[1]
(g) Value for z. Must equal the y-intercept. Unit required ( $s^2$ ). 2 or 3 s.f.	[1]
	[Total: 20]

Pa	ige 4	Mark Scheme	Syllabus	Paper
		GCE A/AS LEVEL – May/June 2008	9702	32
2 Ma	nipulatior	n, measurement and observation		
Su	ccessful o	collection of data		
(b)	(i) First	measurement of circumference to nearest mm. Unit n	nust be given.	[1]
(c)	Measure	ment of $t_1$ .		[1]
(c)	Repeate	d measurements for $t_1$ (or $t_2$ ).		[1]
(d)	Second r	neasurement of <i>c</i> .		[1]
(d)	Second r	neasurement of circumference < first measurement.		[1]
(d)	Measure	ment of $t_2$ .		[1]
Qu	ality of da	ata		
(d)	t decreas	ses when <i>c</i> decreases.		[1]
Pre	esentatior	of data and observations		
Dis	play of ca	alculation and reasoning		
(b)	• •	e of first radius calculated correctly. Consistent unit mick correct use of $c = 2\pi r$ .	ust be given.	[1]
(d)	Value of	second radius, with same s.f. (or one more than) $c_2$ .		[1]
(e)	Possibilit two (	calculation to check proportionality. ies include: calculations of <i>t<sup>2</sup>/r</i> or of <i>t<sup>2</sup></i> values and ratio of <i>r</i> values both calculated.		[1]

#### Analysis, conclusions and evaluation

#### Drawing conclusions

 (e) Sensible comments relating to calculations and suggested relationship. The only way this mark can be scored without the first (e) mark is if the results show the wrong trend and it is argued that this disproves the suggested relationship (but don't credit 'results show inverse proportionality'). [1]
