# MARK SCHEME for the May/June 2013 series

# 9702 PHYSICS

9702/53

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers. 12

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2		Mark Scheme	Syllabus	Paper
		GCE AS/A LEVEL – May/June 2013	9702	53
Pla	nning (15	marks)		
De	fining the	problem (3 marks)		
Р	<i>h</i> is the i	ndependent variable or vary <i>h</i> .		[1]
Р	Q is the	dependent variable or measure Q (allow <i>t</i> ).		[1]
S	Keep <i>l</i> <u>c</u>	onstant.		[1]
Ие	thods of (	data collection (5 marks)		
N		diagram of apparatus: including labelled measuring vater. (Measurement may be credited in the text.)	cylinder/calibra	ated beaker to [1]
Л	Vary pos	ition of vertical/larger tube.		[1]
Л	Measure	h  and  l with a rule/caliper.		[1]
Л	Measure	d with a travelling microscope or vernier calipers.		[1]
N	Measure	<i>t</i> with stopwatch.		[1]
/le	thod of a	nalysis (2 marks)		
A	Plot a gra	aph of Q against <i>h</i> . [Allow lg Q against lg <i>h</i> ]		[1]
ł	$\eta = \frac{2\pi \mu}{l \times gr}$	adient		
	Must inc	ude gradient and $\eta$ must be subject of formula.		[1]
Sat	fety consi	derations (1 mark)		
S	prevent i	d method to prevent <u>spills</u> , e.g. use tray/sink/cloths or <u>njury</u> when adjusting metal/glass <u>tubes</u> by wearing pro d from the diagram.		
		etail (4 marks)		
D 1		points might include		[4]
1 2	•	experiment for same <i>h</i> <u>and average</u> to determine the density of water including method to ation	measure mas	s and volume
3		ny readings of <i>d</i> <u>and average</u>		
4		ship is valid if <u>straight line passing through origin</u> [if lg-lg	graph allow st	raight line with
5	•	o check that tube is horizontal		
6	Detail on	measuring h to the centre of the horizontal tube e.g. ac	ld radius of tub	е
7		nperature of water constant

## 2 Analysis, conclusions and evaluation (15 marks)

	Mark	Expected Answer	Additional Guidance
(a)	A1	Gradient = 1 / <i>EW</i> <i>y</i> -intercept = 1 / <i>E</i>	
(b)	T1	$\frac{1}{V} / V^{-1}$	Column heading. Allow equivalent unit. e.g. $V^{-1}$ / $V^{-1}$ or 1/V / 1/V or 1/V ( $V^{-1}$ )
	T2	0.20 or 0.196 0.22 or 0.222 0.25 or 0.250 0.30 or 0.303 0.33 or 0.333 0.37 or 0.370	A mixture of 2 s.f. and 3 s.f. is allowed.
(c) (i)	G1	Six points plotted correctly	Must be less than half a small square. Ecf allowed from table. Penalise 'blobs'.
	U1	All error bars in C plotted correctly	Must be within half a small square. Ecf allowed from table. Horizontal.
(c) (ii)	G2	Line of best fit	If points are plotted correctly then lower end of line should pass between (0.75, 0.200) and (0.75, 0.205) <b>and</b> upper end of line should pass between (3.0, 0.352) and (3.0, 0.358). Allow ecf from points plotted incorrectly – examiner judgement.
	G3	Worst acceptable straight line. Steepest or shallowest possible line that passes through <u>all</u> the error bars.	Line should be clearly labelled or dashed. Should pass from top of top error bar to bottom of bottom error bar <b>or</b> bottom of top error bar to top of bottom error bar. Mark scored only if error bars are plotted.
(c) (iii)	C1	Gradient of best fit line	The triangle used should be at least half the length of the drawn line. Check the read offs. Work to half a small square. Do not penalise POT.
	U2	Uncertainty in gradient	Method of determining absolute uncertainty Difference in worst gradient and gradient.
(c) (iv)	C2	<i>y</i> -intercept	Expect to see point substituted into $y = mx + c$ FOX does not score. Do not penalise POT. Should be about 0.15.
	U3	Uncertainty in <i>y</i> -intercept	Difference in worst <i>y</i> -intercept and <i>y</i> -intercept. FOX does not score. Allow ecf from <b>(c)(iv)</b> .

Pag	ge 4	Mark Scheme		Syllabus	Paper
GCE AS/A LEVEL – May/June 2013 9702 53					
(d) (i)	C3	E = 1/ y-intercept and V	Method required. Do not check calculation. Allow ecf from <b>(c)(iv)</b> .		
	U4	Absolute uncertainty in E			
(d) (ii)	C4	Between $2.00 \times 10^{-3}$ F and $2.40 \times 10^{-3}$ F <u>and</u> given to 2 or 3 s.f.	Must be in range. Allow	use of mF.	
(d) (iii)	U5	Percentage uncertainty in W	%uncertainty in <i>E</i> + %u	ncertainty in gr	adient

### [Total: 15]

#### **Uncertainties in Question 2**

(c) (iii) Gradient [U2]

Uncertainty = gradient of line of best fit - gradient of worst acceptable line

Uncertainty =  $\frac{1}{2}$  (steepest worst line gradient – shallowest worst line gradient)

(c) (iv) y-intercept [U3]

Uncertainty = y-intercept of line of best fit – y-intercept of worst acceptable line

Uncertainty =  $\frac{1}{2}$  (steepest worst line *y*-intercept – shallowest worst line *y*-intercept)

(d) (i) [U4]

Absolute uncertainty = max  $E - E = E - \min E = \frac{\max E - \min E}{2}$ 

Absolute uncertainty =  $\frac{\Delta c}{c} \times E$ 

(d) (iii) [U5] Percentage uncertainty =  $\frac{\Delta W}{W} \times 100$ 

 $\Delta W = \max W - W = W - \min W = \frac{\max W - \min W}{2}$ 

 $\max W = \frac{1}{\min E \times \min m}$ 

min *W*=  $\frac{1}{\max E \times \max m}$ Percentage uncertainty =  $\left(\frac{\Delta m}{m} + \frac{\Delta E}{E}\right) \times 100 = \left(\frac{\Delta m}{m} + \frac{\Delta c}{c}\right) \times 100$
