## MARK SCHEME for the October/November 2012 series

## 9702 PHYSICS

9702/33

Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2				Mark Scheme	Syllabus	Paper
				GCE AS/A LEVEL – October/November 2012	9702	33
1	(b)	(i)	Valu	e of <i>h</i> in range 0.085 m $\leq h \leq$ 0.095 m consistent with u	init.	[1]
	(c)	Valu Evid	ie of lence	<i>T</i> in range $0.6 s \le T \le 1.5 s$ consistent with unit. e of repeats.		[1] [1]
	(d)	Six : Help	sets ( o fron	of readings of $h$ and $T$ or raw times scores 4 marks, five n Supervisor –1.	sets scores 3	marks etc. [4]
		Ran	ge: h	$p_{\max} - h_{\min} \ge 15.5 \mathrm{cm}$		[1]
		Column headings: Each column heading must contain a quantity and a unit where appropriate. The unit must conform to accepted scientific convention e.g. $T^2h / s^2m$ (or m s <sup>2</sup> ) and $h^2/m^2$ .				and [1]
		Consistency: All raw values of <i>h</i> must be given to the nearest mm.				[1]
		Significant figures: All values of $h^2$ must have the same number of significant figures as, or one more than, the number of significant figures in <i>h</i> .				ore than, the [1]
		Calculation: Values of $T^2h$ calculated correctly.				[1]
	(e)	(i)	Axes Sens Scal both Scal Scal	s: sible scales must be used, no awkward scales (e.g. 3:10 es must be chosen so that the plotted points occupy at l x and $y$ directions. es must be labelled with the quantity that is being plotte e markings must be no more than three large squares a	)). east half the g d. part.	[1] raph grid in
			Plott All o Dian Cheo both	ing of points: bservations in the table must be plotted on the graph grineter of plots must be $\leq$ half a small square (no "blobs") ck that the points are plotted correctly. Work to an accur the <i>x</i> and <i>y</i> directions.	id. racy of half a s	[1] mall square in
			Qual All p scatt All p	lity: oints in the table must be plotted (at least 5) for this mar ter of all the points about a straight line. oints must be within ± 0.0025 m <sup>2</sup> (25 cm <sup>2</sup> ) in the <i>h</i> <sup>2</sup> direc	k to be scored tion of a straig	[1] . Judge by the nt line.
		(ii)	Line Judg Ther Allow canc	of best fit: ge by balance of all the points on the grid (at least 5) abo re must be an even distribution of points either side of th w <u>one</u> anomalous point only if clearly indicated (i.e. circle didate. Line must not be kinked or thicker than half a sma	out the candida e line along th ed or labelled) all square.	[1] ate's line. e full length. by the
