CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International Advanced Subsidiary and Advanced Level

MARK SCHEME for the October/November 2014 series

9702 PHYSICS

9702/21

Paper 2 (AS Structured Questions), maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Page 2		Mark Scheme Cambridge International AS/A Level – October/November 2014		Paper	
				21	
1	(a)	temperature current (allow amount of substance and luminous intensity)		B1 B1	[2]
	(b)	base units of force constant: $kg m s^{-2} m^{-1}$ or $kg s^{-2}$ base units of time and mass: s and kg base units of C : $s (kg s^{-2}/kg)^{1/2}$ cancelling to show no units		B1 C1 B1	[3]
2	(a)	pressure = force / area (normal to the force) [clear ratio essential]		B1	[1]
	(b)	(i) $P = mg / A = (5.09 \times 9.81) / A$		C1	
		$A = (\pi d^2 / 4) = \pi \times (9.4 \times 10^{-2})^2 / 4 (= 0.00694 \mathrm{m}^2)$		C1	
		P = 49.93 / 0.00694 = 7200 (7195) Pa (minimum of 2 s.f. required)		A1	[3]
		(ii) $\Delta P/P = \Delta m/m + 2\Delta d/d$		C1	
		= $0.01 / 5.09 + (2 \times 0.1) / 9.4$ (= $0.0020 + 0.021$ or 2.3%)		C1	
		$\Delta P = 170 (165 \text{ to } 167) Pa$		A1	[3]
	(iii) P = 7200 ± 200 Pa		A1	[1]
3	(a)	random error (in the measurements) of the length OR resistance		B1	[1]
	(b)	gradient = (3.6 – 1.9) / (0.8 – 0.4) = 4.25		C1 A1	[2]
	(c)	$R = \rho l / A$		C1	
		ρ = gradient × area = $4.25 \times 0.12 \times 10^{-6}$		C1	
		= $5.1(0) \times 10^{-7} \Omega \mathrm{m}$		A1	[3]
	(d)	resistance decreasing with increasing area correct shape with curve being asymptote to both axes		B1 B1	[2]

•	age 3	Cambridge International AS/A Level – October/November 2014	9702	21	51
4	(a) (i)	acceleration = $(v - u) / t$ or $(12 - 0.5) / 4$		C1	
		= $(12-0.5)/4 = 2.9(2.875)$ (= approximately 3 m	s ⁻²)	M1	[2]
	(ii	x = (u+v)t/2			
		$= [(12 + 0.5) \times 4] / 2$		C1	
		= 25 m		A1	[2]
	(iii)	line with increasing gradient non-zero gradient at origin		M1 A1	[2]
	(b) (i)	weight down slope = $2 \times 9.81 \times \sin 25^{\circ}$ = $8.29 / 8.3$		M1	[1]
	(ii)	$(F = ma)$ 8.3 - $F_R = 2 \times 2.9$		C1	
		$F_{R} = 2.5 (2.3 \text{ if 3 used for } a) \text{ N}$		A1	[2]
5	(a) (i)	change in kinetic energy = $\frac{1}{2}mv^2$		C1	
		= $0.5 \times 25 \times (0.64)^2 = 5.1(2) \text{ J}$		A1	[2]
	(ii) zero		A1	[1]
	(iii)	(–) 5.1(2) J		A1	[1]
	(b) (i)	PE = mgh		C1	
		$= 350 \times 0.64 \times 25$		C1	
		= 5600 J		A1	[3]
		(If full length used allow 1/3)			
	(ii)	$P = Fv$ or gain in PE/ t , E_P/t or work done/ t , W/ t		C1	
		= 350×0.64 or $5600 / 25$			
		= 220 (224)W		A1	[2]
6		melting: solid to liquid at a specific/one temperature/at the melting point		B1 B1	
		ration: liquid to vapour/gas OR molecules escape from surface of liquemperatures	id	B1 B1	[4]
