

Mark Scheme (Results)

Summer 2013

GCSE Chemistry (5CH1H) Paper 01

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk for our BTEC qualifications.

Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: www.edexcel.com/teachingservices.

You can also use our online Ask the Expert service at www.edexcel.com/ask. You will need an Edexcel username and password to access this service.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2013 Publications Code UG036869

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- For questions worth more than one mark, the answer column shows how partial credit can be allocated. This has been done by the inclusion of part marks eg (1).
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- Write legibly, with accurate spelling, grammar and punctuation in order to make the meaning clear
- Select and use a form and style of writing appropriate to purpose and to complex subject matter
- Organise information clearly and coherently, using specialist vocabulary when appropriate.

Question	Answer	Acceptable answers	Mark
Number			
1(a)(i)	an explanation linking the following • decomposition (of compound/substance /electrolyte)(1)	splitting up/breaking down/breaking up ignore separating reject splitting of atoms/elements/molecules for M1	(2)
	• using (direct) current (1)	using {electrical energy /electricity} reject alternating current/ac	

Question Number	Answer	Acceptable answers	Mark
1(a)(ii)	 (damp blue) litmus (paper) (1) (turns red then) {bleaches goes white} (1) 	allow bleaches indicator for 1 mark ignore indicator goes lighter ignore smells of chlorine/swimming pools ignore any incorrect middle colour mentioned use of suitable named indicator with correct result e.g. (damp) universal indicator paper (1) (turns red then) bleaches (1) starch-iodide paper(1) turns blue-black(1)	(2)

Question	Answer	Acceptable answers	Mark
Number			
1(a) (iii)	poly(chloroethene)	PVC/polyvinylchloride/	(1)
		polychloroethene/poly(chlorethene)	

Question	Answer	Acceptable answers	Mark
Number			
1(b)(i)	D AgCI(s)		(1)

Question Number	Answer	Acceptable answers	Mark
1(b)(ii)	same/no change		(1)

Question	Answer	Acceptable answers	Mark
Number			
1(b)(iii)	$ HCI + AgNO_3 \rightarrow AgCI + HNO_3 $	$Ag^+ + CI^- \rightarrow AgCI$	(2)
	• reactant formulae (1)		
	product formulae (1)	max 1 if any incorrect attempt to balance	
		reject incorrect use of cases and non-subscripts	

Question	Answer	Acceptable answers	Mark
Number			
2(a)	remove delivery tube from water before stopping heating	other words which make sequence clear	(1)
		use of (Bunsen) valve	

	Answer	Acceptable answers	Mark
Number			
2(b) E	B C₄H ₈		(1)

Question	Answer	Acceptable answers	Mark
Number			
2(c)	contains a {double/multiple} bond	ignore "spare bonds"	(1)
		ignore reference to number of	
		hydrogen atoms attached.	

Question Number	Answer	Acceptable answers	Mark
2(d)	A description to include		(3)
	bromine water is orange (1)	red / yellow / brown any combination of these	
	propane: (remains) orange/ no colour change (1)		
	 propene: becomes colourless /decolourises (1) 	ignore clear /discolours	

Question Number	Answer	Acceptable answers	Mark
2(e)	 An explanation linking any two of shorter chain molecules are more useful ORA (1) demand for shorter chain molecules ORA (1) meets demand reduces the excess of longer chain molecules (1) (cracking) produces alkenes (1) alkenes used to make polymers (1) 	reject long chain molecules are useless named fraction/use/fuel named fraction /use/fuel	(2)

Question Number	Answer	Acceptable answers	Mark
3(a)(i)	D less than 0.5%		(1)

Question Number	Answer	Acceptable answers	Mark
Number 3(a)(ii)	 A explanation linking any two of dissolves /is absorbed (1) in the oceans (1) incorporated into marine organisms (1) formed carbonate rocks (1) 		(2)
	 increase in (green) plants/plants start growing photosynthesis /plants remove carbon dioxide 	reject references to plants respiring/breathing	

Question	Answer	Acceptable answers	Mark
Number			
3(a)(iii)	traps <u>heat</u>	reflects heat back to Earth	(1)
		reject references to the ozone	
		layer	

Question Number	Answer	Acceptable answers	Mark	
3(b)	A description to include		(2)	
	• glowing splint (1) M1	smouldering splint reject unlit splint ignore blown out splint		
	• relights (1) M2	M2 dependent on M1 but lighted splint burns brighter (2)		

Question Number	Answer	Acceptable answers	Mark
3(c)(i)	 volume of gas in bell jar decreases/water rises to fill the space (1) oxygen is removed from the air (1) 		(2)

Question Number	Answer	Acceptable answers	Mark
3(c)(ii)	(amount of gases remaining) 79% (1)		(2)
	(volume remaining) = $\frac{1000 \times 79}{100}$ (1)	ecf for incorrect percentage of volume of gases remaining in M1	
	= 790 (cm ³)		
		correct answer or valid calculation alone scores (2)	

Question Number	Answer	Acceptable answers	Mark
3(d)	magnesium sulphate	accept magnesium sulphate	(1)

Question Number	Answer	Acceptable answers	Mark
4(a)	tin {more expensive/costs more} (than aluminium/steel) ORA (1)	rarer	(2)
	 amount of tin in Earth smaller (than aluminium/steel) ORA (1) 	Turci	

Question	Answer	Acceptable answers	Mark
Number			
4(b)	C - reduction		(1)

Question Number	Answer	Acceptable answers	Mark
4(c)(i)	an explanation linking the following		(2)
	a mixture of (1)	reject compound ignore combined/joined	
	• metals (1)	specific examples reject reference to non-metals	
		metals melted together (2)	

Question Number	Answer	Acceptable answers	Mark
4(c)(ii)	in pure metal /aluminium atoms are all same size (1) in pure metal /aluminium.	ions or particles for atoms reject molecules once only	(3)
	 in pure metal /aluminium {layers/sheets/atoms} {slide/slip/move} (over one another) easily(1) 		
	magnesium atoms larger (1)	different sized particles	
	 disrupt {layers/structure/arrangeme nt} of aluminium atoms (1) 	{lock/hold/jam} layers together	
	prevent {layers/sheets/atoms} {slip/slide/move} (1)		

Question Number	Answer	Acceptable answers	Mark
5(a)	 an explanation linking any three of (removes waste) gases that are acidic contain sulfur dioxide (1) (produced from) sulfur impurities in coal (1) (limestone/calcium carbonate) {reacts with/neutralises} (gases)(1) 	{limestone/calcium carbonate} is a base (1) ignore limestone/calcium carbonate is an alkali	(3)

Question	Answer	Acceptable answers	Mark
Number			
5(b)	CaCO ₃ → CaO + CO ₂ • reactant formula (1) • product formulae (1)	max 1 if any incorrect attempt to balance	(2)
		reject incorrect use of cases and non-subscripts	

Question	Answer	Acceptable answers	Mark
Number			
5(c)	C – the lump of calcium oxide		(1)
	cools down		

Question Ir Number		Indicative content	Mark
QWC	*5(d)	An explanation linking some of the following limestone	(6)
Level 1	0 1-2	No rewardable content a limited explanation e.g. limestone formed from sediments on the sea bed. the answer communicates ideas using simple language and uses limited scientific terminology spelling, punctuation and grammar are used with limited accuracy	
2	3-4	 a simple explanation e.g sediments compacted to form limestone which is changed by heat and pressure into marble. the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately spelling, punctuation and grammar are used with some accuracy 	
3	5 - 6	 a detailed explanation e.g. limestone formed from sediments . Molten rock /magma cools to form granite. The heat and pressure change the limestone into marble. the answer communicates ideas clearly and coherently uses a range of scientific terminology accurately spelling, punctuation and grammar are used with few errors 	

Question Number	Answer	Acceptable answers	Mark
6(a)	C – CH ₃ CH ₃		

Question Number	Answer	Acceptable answers	Mark
6(b)	H H	carbon skeleton correct including double bond (1)	(2)
	C=C H	rest of molecule correct (1)	
	н	allow CH₃	

Question	Answer	Acceptable answers	Mark
Number			
6(c)	$CH_4 + 2O_2 \rightarrow CO_2 + 2H_2O$	accept multiples	(3)
	 reactant formulae (1) 		
	 product formulae (1) 		
	 balancing of correct 	reject incorrect use of cases and	
	formulae (1)	non-subscripts	

Question Number		Indicative content	Mark
QWC	*6(d)	 advantages renewable / sustainable more plants can be grown crops use up carbon dioxide and produce oxygen when growing /photosynthesising carbon neutral because the carbon produced during combustion is used when growing the plants does not use up crude oil/non-renewable resources 	(6)
		 disadvantages crops grown for bio-fuels use up land land could otherwise be used to provide homes / less farmland available for growing food crops lots of crops required to provide a small amount of bio-methane bad season reduces availability carbon emissions due to transport and production if qualified 	
Leve I	0	No rewardable content	
1	1-2	 a limited description e.g. using bio-methane conserves fossil fuels and uses up carbon dioxide when plants are grown the answer communicates ideas using simple language and uses limited scientific terminology spelling, puncuation and grammar are used with limited accuracy 	
2	3-4	 a simple description e.g. growing plants to produce biomethane is sustainable and conserves fossil fuels but uses up lots of farm land which could be used to grow plants for food the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately spelling, puncuation and grammar are used with some accuracy 	
3	5 - 6	 detailed description e.g growing plants remove carbon dioxide from the air during photosynthesis and conserv fossil fuels but lots of crops are required to make biomethane and this uses up farm land which could otherw be used to grow crops for food the answer communicates ideas clearly and coherently a range of scientific terminology accurately spelling, puncuation and grammar are used with few er 	vise uses
